CO₂ on the way to school

A global school campaign on transport and climate change

Welcome to CO₂nnect

- a school campaign focusing on CO₂-emissions from transport

Pupils need competencies to meet the challenges of sustainable development - including climate change. Participation in CO₂nnect activities will support this learning. The activities can easily be adapted to a range of age groups and linked to the curricula of many subjects.

CO₂nnect activities for schools:

- investigate CO₂ emissions from travel to school
- share the findings using an international database
- partner with other schools
- discuss CO₂ emissions with people in the community
- take part in a CO₂nnect school competition, linked to the Climate Change Conference in Copenhagen in 2009

Expected learning outcomes for pupils:

- better understanding of climate and transport issues
- skills in participation, cooperation and communication
- improved digital competence and language skills
- motivation to take an active role in society
